Contract Software Development Services

Escape Velocity Software first and foremost is a contract software development team. Engineering is the DNA of our company and founders.

We are an experienced and agile team of technical gurus located in Sacramento, CA. Too often are technology initiatives designed and executed by inexperienced teams without regard to business requirements.

Our strong technical skills coupled with strong project management and operational experience gives you the advantage to get projects done quickly and correctly the first time.

Blast off with...

- Microsoft .Net Platform
- C# Development
- ASP.Net
- WPF
- Network Applications
- n-Tier
- Self-service
- Web Applications
- Robotics
- CRM and ERP
- SQL Server
- LAMP Stack
- PHP and MySQL
- Cloud Computing
- Project Management
- Waterfall / Iterative / Agile
- Test Engineering

Microsoft Partner

The Microsoft stack is ideal for most business software initiatives. Being a registered Microsoft partner, we are experts from desktop to server and everywhere in between.

.Net Environment

The .Net environment allows for rapid implementation of business applications while reducing investment in non-defensible software. We are experts in the .Net environment from web services to WPF.

Cloud Computing

Cloud computing provides a cost effective, robust, and secure platform for n-Tier and Web Applications. We are experts on the most mature cloud platform, Amazon Web Services.

Consulting and Project Management Services

Escape Velocity Software has experience with projects ranging in sizes from \$10k to over \$5mm. Our project teams have been composed of a few startup entrepreneurs up to multiple Global 500 stakeholders. We have the experience to develop a successful technology plan through implementation.

Experienced in the launch, operation, funding, and sale of software businesses – we provide guidance, services, experience, and vital community connections for your business or technology initiative.

Lifecycle Management

We understand the business behind the software. From concept to design, from test to delivery, from support to maintenance the business model comes first.

We help you evaluate the business factors that go into your software initiatives, define business goals and priorities, and resolve those business decisions with software and technology.

Scalability, growth, marketing, funding, intellectual property, barriers to entry, competitive advantages, costs, and return on investment are all part of the EVS perspective.

Our services are always delivered in consideration of:

- Best practice software lifecycle tools and techniques.
- Fitting technology architecture, roadmap, and strategy to your business.
- Creating or maintaining intellectual property and competitive advantage.
- Adaptation to your corporate philosophy and culture: agile, waterfall, iterative, ad hoc.
